To Whom It May Concern:

In December of 2019, pursuant to our agreement with Hunter, the Bishop Fox assessment team conducted an application penetration test of the Hunter.io application, an external penetration test of its external perimeter, and a cloud security review of its GCP environment.

The assessment objective was to identify, within the designated time and scope, any security issues in the Hunter.io application, external perimeter, and cloud environment. The assessment team combined automated vulnerability scanning and manual penetration testing techniques in order to rapidly locate attack vectors and simulate real-world exploitation.

Hunter has been provided the detailed findings and recommendations resulting from the assessment in an assessment report.

Sincerely,

Daniel Wood
Associate VP of Consulting
Bishop Fox
