

Application Name: hunter-mail	Case ID: 572
Application URL: https://hunter.io	Application Type: Web
Assessment Type: TIER 2	Issue Date: 3/30/2023
Assessment Status: Complete	Expiration Date: 3/29/2024

Statement of Validation

The purpose of this report is to provide users with verification that **Hunter Web Services, Inc** has successfully completed a Cloud Application Security Assessment (CASA) Assessment, validating **hunter-mail** has satisfied CASA application security requirements for **Web** application set forth by the App Defense Alliance (ADA). This assessment includes:

- A review of application conformance with [CASA recognized security frameworks](#) (if applicable)km
- Verification that automated security test (AST) application scan results of **hunter-mail** against functional CASA requirements contain:
 - No findings linked to common weakness enumerations ([CWEs](#)) with **high** likelihood of exploit
 - No findings linked to CWEs with **medium** likelihood of exploit (*only applicable for [CASA revalidation](#))
- Verification of conformation to non-functional CASA requirements, validated through a self-attestation survey

In meeting these assessment requirements, **hunter-mail** is verified to meet the CASA TIER 2 requirements.

About CASA

As global ecosystems of applications, platforms, and systems evolve and connect through complex cloud-to-cloud integrations, an established and industry-recognized application securitization standard becomes evermore paramount to guarding consumer data and privacy. At risk in this evolution are non-hardened applications exchanging data with secure cloud infrastructure through trusted data sharing integrations. Thus introducing: CASA.

CASA is based on the industry-recognized Open Web Application Security Project ([OWASP](#)) Application Security Verification Standard ([ASVS](#)) to provide third-party (3P) application developers with: (1) a basis for testing technical application security controls, (2) a consistent set of requirements for secure application development, and (3) homogenized coverage and assurance levels for providing security verification using industry-aligned frameworks and open security standards.

More information on CASA, including a complete list of CASA requirements can be located on the [CASA developer site](#).
